

Unvented Hot Water Systems

Unvented Hot Water Systems

The aim of this course is to train candidates on the installation and safety requirements of unvented hot water systems.

The Water Supply Regulations have been in force in the United Kingdom for over five years, but many operatives still have to complete a form of recognised assessment in order to self certify work.

This course was developed to enable plumbing and heating engineers to confirm their competence in installing and maintaining unvented hot water storage systems. On successful completion, it allows candidates' membership of CORGI's Unvented Hot Water Competent Persons Scheme and other industry-standard Competence Persons Schemes.

It is illegal to work on unvented hot water systems with capacities of over 15l unless you hold a recognised qualification.

This is a one day course which consists of training followed by a practical and written test. After booking a place on the course, participants are sent a revision pack to study in advance.

Benefits

Operatives will be able to expand their range of services.

By undertaking training and assessment in unvented hot water systems you will no longer need to contact your local Building Control Officer to have your work approved. You will be recognised as being competent to design, install, service and maintain unvented systems and can therefore self certify your own work.

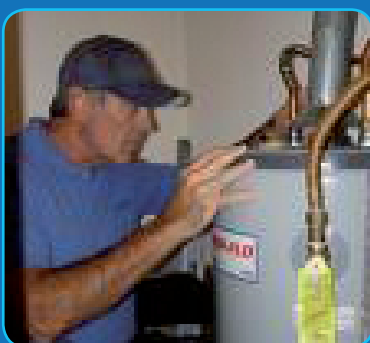

Does It Apply To Me?

This course is aimed at plumbers, gas fitters and anyone who is involved in the installation of condensing boilers.

What Now

To book a place on the above course, or for information on other Get Training services, call the number below today.

We offer buy now, pay later and interest free credit finance options on all our courses. Please contact us for more details.
